

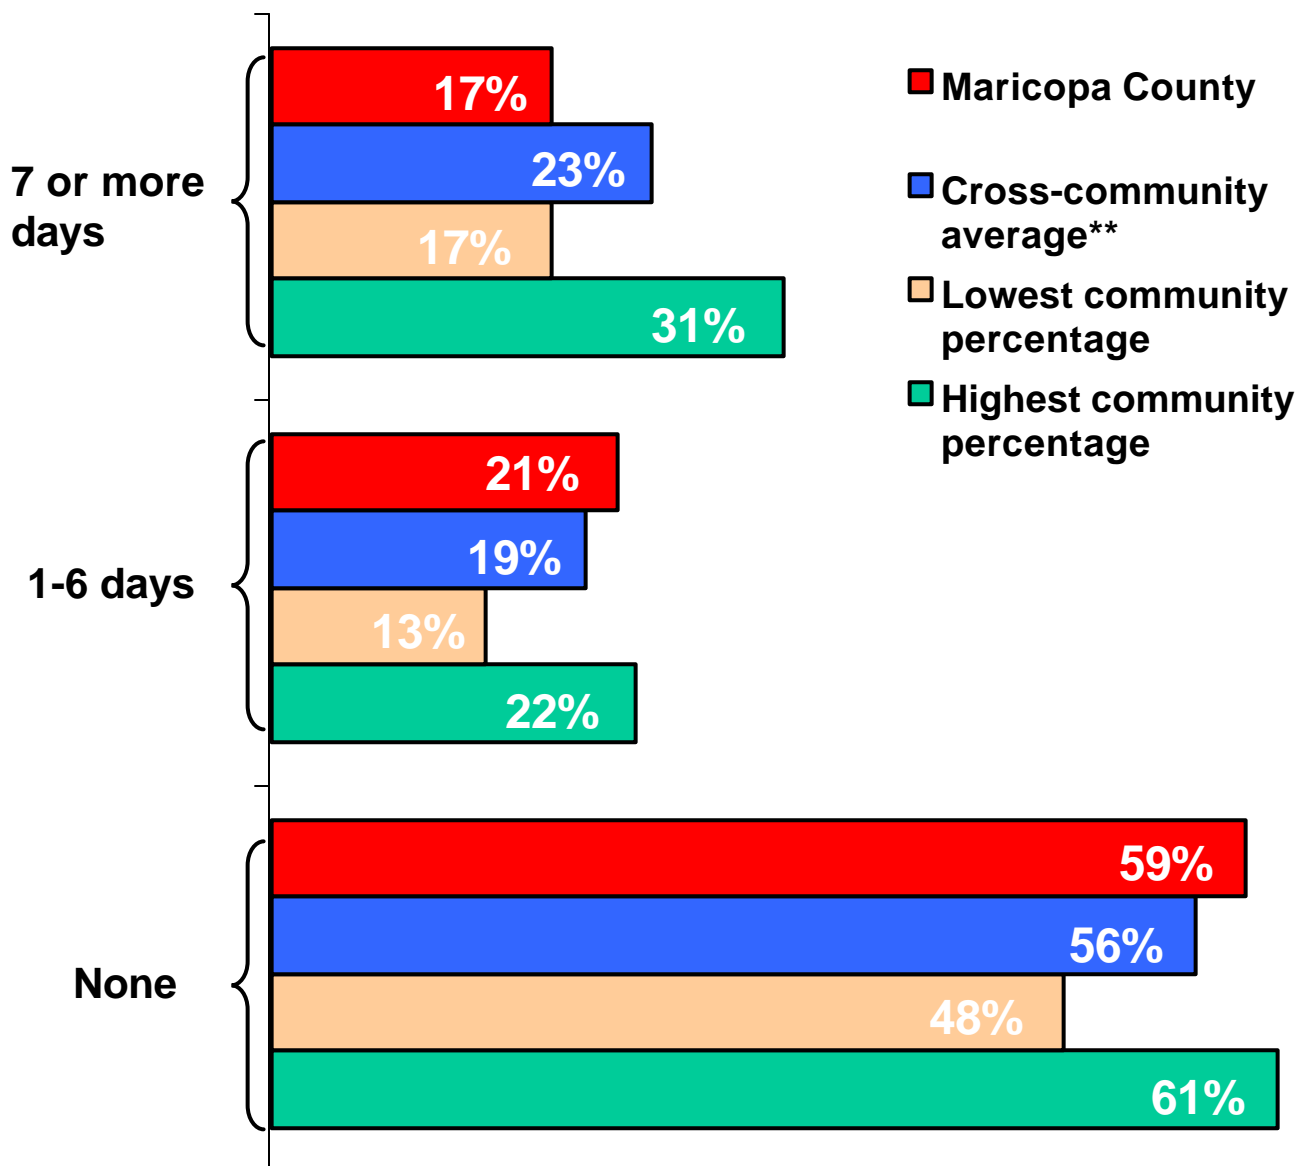

Figure 13.3

## ALL-COMMUNITY COMPARISON

Percentage of people age 65+ whose physical or mental health interfered with their activities in the past month, among those who had one or more unhealthy days\*

Number of days in past month when physical or mental health interfered with activities

Base: Reported one or more unhealthy days in the past month

\*People who had one or more "unhealthy" days were asked "During the past 30 days, for how many days did poor physical or mental health keep you from doing your usual activities, such as self-care, work, or recreation?" For a definition of "unhealthy" days see Figure 13.1, footnote 1.

\*\* The cross-community average was obtained by calculating the percentage for each separate community, then summing these percentages and dividing by the total number of communities.
