

MARICOPA COUNTY

Figure 14.1

Percentage of people age 65+ who report being in good to excellent health*

Note: Percentages may not add up to 100% due to rounding and/or missing information.

*People were asked: "Would you say that, in general, your health is Excellent, Very good, Good, Fair, Poor, or Very poor?"

**Includes people who said their health was Fair, Poor, or Very poor.

Unweighted N=619

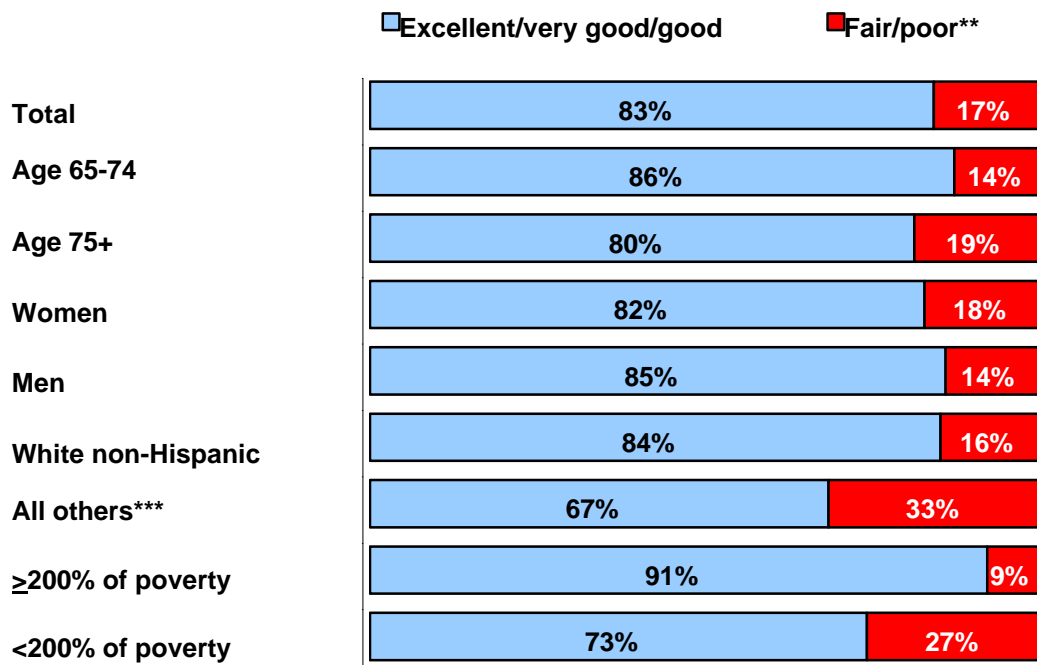

Weighted N=351422

In Maricopa County, more than four of five (83%) people age 65+ report being in good to excellent health. Fewer than one of five (17%) people say that their health is fair or poor.

MARICOPA COUNTY

Figure 14.2

Percentage of people age 65+ who report being in good to excellent health,* by demographics

Note: Percentages may not add up to 100% due to rounding and/or missing information.

*People were asked: "Would you say that, in general, your health is Excellent, Very good, Good, Fair, Poor, or Very poor?"

**Includes people who said their health was Fair, Poor, or Very poor.

***All others includes Hispanic of any race, Black/African American, Asian, other, and mixed race.

Unweighted N=619

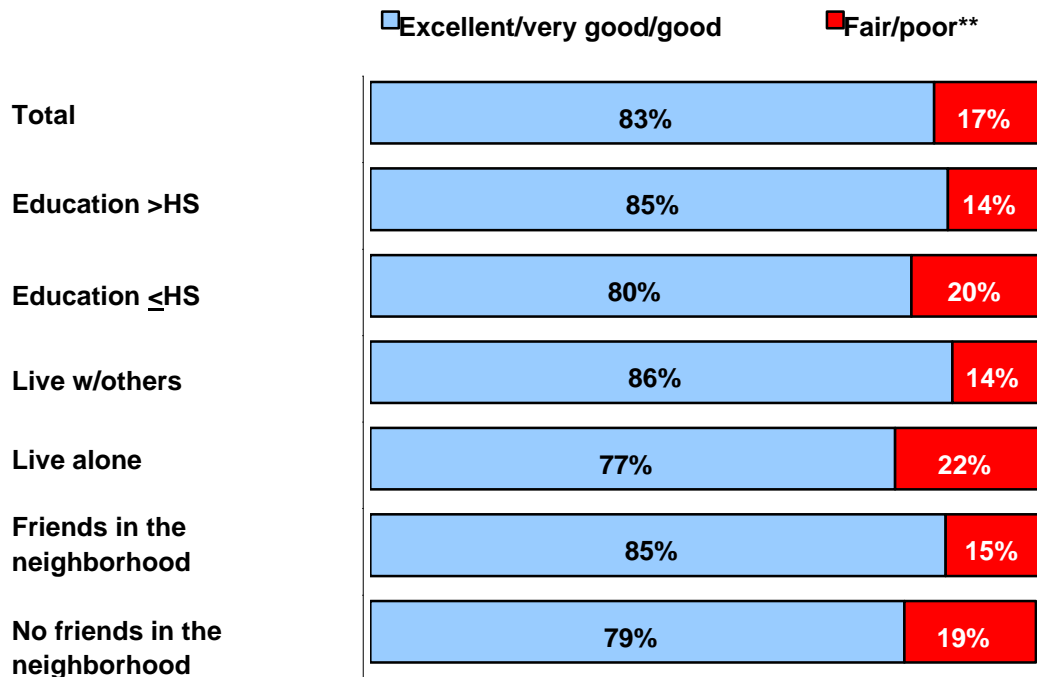

Weighted N=351422

Overall, more than four of five (83%) people age 65+ report being in good to excellent health; fewer than one of five (17%) in fair or poor health. Figure 14.2 shows differences by demographic characteristics. People with incomes at or above 200% of poverty are more likely than those with lower incomes to say that their health is excellent/very good/good (91% vs. 73%). While the difference within the race category appears large (84% vs. 67%), note that the percentage of people other than white non-Hispanic is small in this community. Therefore, caution should be exercised when making inferences by race.

Figure 14.3

Percentage of people age 65+ who report being in good to excellent health,* by demographics (cont.)

Note: Percentages may not add up to 100% due to rounding and/or missing information.

*People were asked: "Would you say that, in general, your health is Excellent, Very good, Good, Fair, Poor, or Very poor?"

**Includes people who said their health was Fair, Poor, or Very poor

Unweighted N=619

Weighted N=351422

Figure 14.3 shows additional differences by demographic characteristics. People age 65+ who live with others are more likely than their counterparts to say that their health is excellent/very good/good (86% vs. 77%). The differences in health status are small within the other demographic categories.
