Visiting Nurse Service of New York

The ADVANTAGE Initiative
Improving Communities for an Aging Society

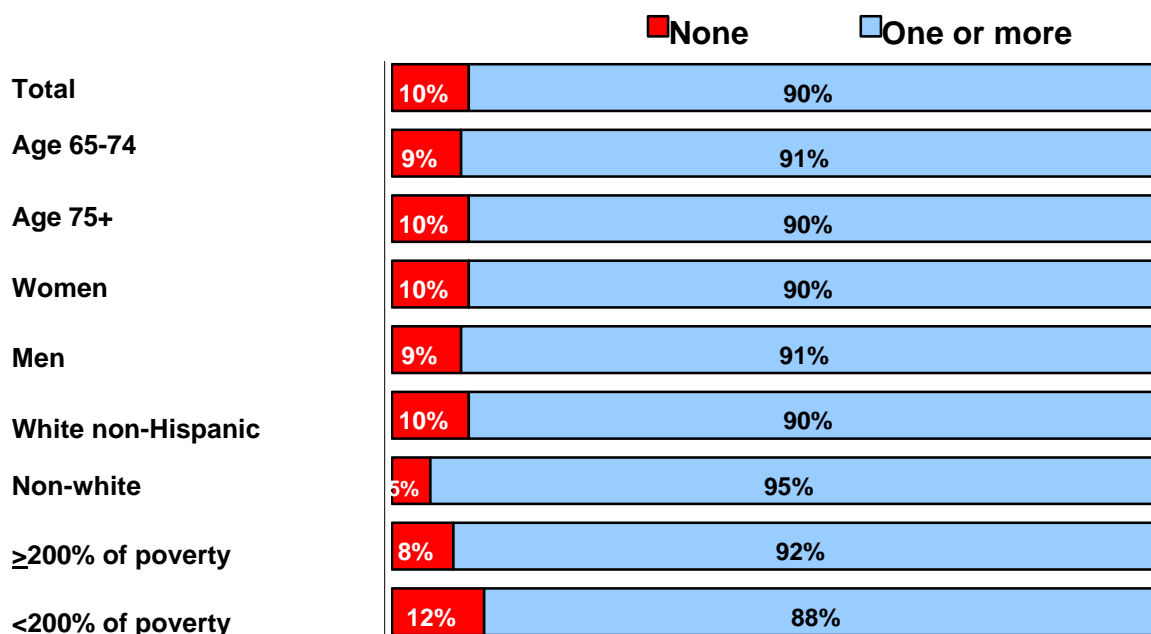

Overall, in Maricopa County, nine of ten (90%) people age 65+ engaged in one or more social, religious or cultural activity in the past week. Nearly one of five (18%) engaged in one activity; two of five (41%) participated in two activities; and three of ten (31%) engaged in three activities (not shown). However, one of ten (10%) did not engage in *any* social, cultural or religious activities in the past week.

Note: Indicator 30 corresponds to Question 86a-c in the AdvantAge Initiative survey questionnaire.

The
ADVANTAGE
Initiative
Improving Communities for an Aging Society

Overall, nine of ten (90%) people age 65+ engaged in one or more social, religious, or cultural activity in the past week. However, one of ten (10%) did not. Figure 30.2 shows differences by demographic characteristics. People with incomes below 200% of poverty are more likely than those with higher incomes not to have attended *any* social, religious or cultural activity in the past week (12% vs. 8%). While the difference within the race category appears large (10% vs. 5%), note that the percentage of non-whites is small in this community. Therefore, caution should be exercised when making inferences by race.

Initiative
Improving Communities for an Aging Society

Figure 30.3 shows additional differences by demographic characteristics. The differences within the health status and friends in the neighborhood categories are striking. People age 65+ in fair or poor health and those without friends in the neighborhood are more likely than their counterparts not to have attended *any* social, religious, or cultural events in the past week (18% vs. 8%; 17% vs. 7%, respectively). People with a high school or lower education are also more likely than those with a higher education not to have attended *any* social, religious, or cultural events in the past week (13% vs. 7%).

Note: HS=high school; Ex=excellent; vg=very good.
